3 Things I Absolutely Should Know Today

Google launches Antigravity AI coding assistant, successor to Gemini CLI

What happened: Google announced Antigravity at I/O 2026, a Go-based AI coding assistant that runs async background workflows and replaces the Gemini CLI and Gemini Code Assist tiers.

Why you should care: As a Diploma IT student, Antigravity offers fast, integrated code generation and task automation directly in your IDE, helping you prototype projects and complete assignments more efficiently.

Impact: Medium

CERT-In alerts on critical PHP vulnerabilities

What happened: CERT-In issued an advisory on 22 Oct 2026 about multiple high-severity PHP flaws that allow remote code execution, risking website defacement and data theft.

Why you should care: PHP is widely used in campus projects and internships; the vulnerabilities can affect locally hosted labs or freelance work. Promptly updating PHP versions and applying patches will protect your codebases and client sites from exploitation.

Impact: Medium

Google Summer of Code (GSoC) 2024 - Open-Source Paid Internship for Students

What happened: Google's annual GSoC program opens applications for university students to work on open-source projects over a summer, offering a stipend and mentorship from participating organizations.

Why you should care: As a Diploma IT student in India, GSoC provides a paid, remote opportunity to gain real-world development experience, strengthen your résumé, and build connections in the global open-source community.

Impact: Medium

Cursor releases Composer 2.5, enabling multi-file refactoring via natural language

What happened: Cursor's AI assistant now includes Composer 2.5, allowing developers to issue natural-language commands that refactor whole files, generate components, and modify multiple files across frameworks like React, Next.js, and Angular.

Why you should care: The feature streamlines common student tasks such as building UI components or restructuring codebases, reducing manual edits and speeding up learning of modern web frameworks.

Impact: Medium

Developer World

Azure APIOps CLI - New Tool for Automated API Deployment

What happened: Microsoft transitioned the archived Azure APIOps GitHub repository to a new, actively maintained APIOps CLI, offering performance upgrades, stability improvements, and streamlined API deployment workflows.

Why you should care: The CLI lets IT diploma students practice GitOps-style CI/CD for Azure API Management, gaining hands-on experience with industry-standard API automation without needing to manage complex pipelines.

Impact: Medium

Top Backend Deployment Platforms for 2026 - Quick Reference

What happened: A recent blog enumerated leading services for deploying backend applications, including Kuberns, Railway, Render, Fly.io, Heroku, AWS App Runner, Northflank, DigitalOcean App Platform, Google Cloud Run, and Cloudflare Workers, highlighting suitability for APIs, workers, cron jobs, containers, and edge runtimes.

Why you should care: Knowing which platforms support low-ops deployment and container-free options helps students select the right environment for projects, internships, or portfolio demos, especially when resources are limited.

Impact: Medium

Cybersecurity

CERT-In advisory warns of eMudhra certificate authority breach

What happened: CERT-In flagged a security compromise affecting eight intermediate digital certificate authorities operated by eMudhra, which could let attackers forge SSL/TLS certificates for any website.

Why you should care: As a Diploma IT student building web or mobile apps, trusting forged certificates can expose your development and testing environments to man-in-the-middle attacks and invalidate SSL checks. Understanding this advisory helps you verify certificate chains and avoid using compromised CAs in projects.

Learn

Harvard CS50 - Full Computer Science University Course

What happened: Harvard's introductory CS50 course is available online, covering fundamentals of computer science, programming concepts, and problem-solving with lectures, labs, and full source code.

Why you should care: Provides a comprehensive, internationally recognized foundation that aligns with the BCA/Diploma IT curriculum, enhancing theory and practical coding skills useful for campus exams and future employment.

Impact: Medium

Google Courses Every BCA Student Needs

What happened: A YouTube short lists essential free Google certifications and learning paths (e.g., Google IT Support, Data Analytics, Cloud Digital Leader) targeted at BCA students.

Why you should care: These certifications are industry-validated, free to enroll, and improve employability in Indian IT job markets, especially for entry-level roles after a diploma.

Impact: Medium

Events Near You

No in-person tech events were found in Gandhinagar, Ahmedabad, or GIFT City, Gujarat.

Tools Worth Trying

RapidAPI - Free Public API Marketplace

What happened: RapidAPI, the largest public API marketplace, now offers free listing for API products, handling billing, authentication, and documentation hosting.

Why you should care: Provides a ready-made platform for Diploma IT students to publish, test, and monetize their APIs without building backend infrastructure, useful for coursework and portfolio projects.

Impact: Medium

Source: suprsonic.ai

Zuplo - Free API Management Platform

What happened: Zuplo launched a free tier allowing up to 10 projects, unlimited edge environments, 1 million monthly requests, and 10 GB egress, with built-in API key authentication, rate limiting, and OpenAPI support.

Why you should care: Enables students to design, deploy, and manage APIs quickly using TypeScript, supporting hands-on learning of modern API development and edge deployment.

Impact: Medium

Tech Outside AI

Arm unveils its first production silicon - the Arm AGI CPU with 136 cores

What happened: In March 2026 Arm announced its first ever production chip, the Arm AGI CPU, a 136-core processor that marks the company's shift from pure IP licensing to manufacturing its own silicon.

Why you should care: Understanding this move helps IT students grasp emerging CPU architectures, potential software-toolchain changes, and new opportunities for developing AI-focused applications on ARM hardware, which is increasingly used in India's mobile and edge-device markets.

Global Semiconductor Market Surges to $795.6 Billion in 2025, Projected to Reach $1.5 Trillion by 2026

What happened: Industry reports from the Semiconductor Industry Association and World Semiconductor Trade Statistics show 2025 sales hitting $795.6 billion, a 26% YoY increase, with forecasts of $1.5 trillion in 2026 driven by AI, advanced computing and data-center demand.

Why you should care: The rapid expansion creates heightened demand for hardware-related knowledge, firmware development, and testing skills-areas where a Diploma IT graduate can find entry-level roles or internships in Indian electronics firms and multinational R&D centers.

Impact: Medium.

My Action for Tomorrow

Update all local PHP installations to the latest stable version and apply any pending security patches.

If You Only Remember 3 Things

- Antigravity AI can accelerate coding tasks directly in your IDE.
- Critical PHP bugs reported on 22 Oct 2026 require immediate version updates.
- GSoC 2024 offers a paid, remote open-source internship for Diploma IT students.
