3 Things I Absolutely Should Know Today

Critical PHP Vulnerabilities (CVE-2026-109618, CVE-2026-109619) Discovered

What happened: Researchers reported two remote-code-execution flaws affecting all PHP versions from 5 onward, involving use-after-free and type-confusion bugs in OPcache.

Why you should care: PHP underpins many web projects and internships; these flaws expose code to takeover, making immediate remediation essential for secure deployments.

Impact: Critical

What to do: Verify your PHP version, apply the latest security patches, and audit any legacy applications for vulnerable OPcache usage.

Tencent Launches Hy4, a New Open-Source Large Language Model

What happened: Tencent announced Hy4, an open-source LLM with visual understanding, long-context handling and enhanced instruction-following for agentic tasks.

Why you should care: The model is freely downloadable, enabling Diploma IT students to experiment with multimodal AI applications and build portfolio projects without licensing fees.

Impact: Medium

IndiaAI Mission launches three indigenous AI models for offline and secure sector use

What happened: The IndiaAI Mission unveiled three home-grown foundation models designed to operate offline, targeting banking, cybersecurity and defence sectors.

Why you should care: These locally sourced models offer cost-effective, compliance-friendly AI alternatives, allowing Indian IT diploma graduates to work on secure AI projects for domestic enterprises.

Impact: Medium

AI

Tencent Launches Hy4, a New Open-Source Large Language Model

What happened: Tencent announced Hy4, its latest-generation open-source LLM with visual understanding, long-context handling and enhanced instruction-following for agentic tasks.

Why you should care: The model is freely available, so a Diploma IT student can download, experiment with multimodal AI applications, and build portfolio projects using cutting-edge capabilities

without licensing costs.

Impact: Medium

Microsoft Reports Threat Actors Exploiting Agentic AI to Harvest Cloud Secrets

What happened: Microsoft's security blog detailed how, since August 2026, attackers have used agentic AI frameworks to automate large-scale queries on GitHub, targeting organization names and cloud-service keywords to locate exposed secrets.

Why you should care: Understanding these tactics helps IT students grasp emerging AI-driven security risks, informing secure coding practices and preparing them for cybersecurity roles.

Developer World

React Native emerges as the most-starred UI framework on GitHub

What happened: React Native, the open-source library from Facebook for building cross-platform iOS and Android apps, has surpassed 121 k stars, making it the top-ranked UI framework in GitHub's trending list.

Why you should care: Mastering React Native gives a Diploma IT student a marketable skill for mobile app development, a high-demand area in Indian tech firms and startups.

Cybersecurity

Critical PHP Vulnerabilities (CVE-2026-109618, CVE-2026-109619) Discovered

What happened: Researchers reported two critical remote-code-execution flaws affecting all PHP versions from 5 onward, including use-after-free and type-confusion bugs in OPcache.

Why you should care: PHP is core to many web development projects and internships; understanding these flaws helps you secure code, audit legacy applications, and prepare for employer-driven security

audits.

Impact: Medium

India

IndiaAI Mission launches three indigenous AI models for offline and secure sector use

What happened: The IndiaAI Mission unveiled three home-grown foundation models designed to operate offline, targeting sectors such as banking, cybersecurity, and defence.

Why you should care: These models provide a locally sourced, cost-effective alternative to foreign AI services, enabling Indian IT diploma graduates to work on secure, compliance-friendly AI projects for domestic enterprises.

Impact: Medium

Learn

Harvard CS50 - Introduction to Computer Science (edX)

What happened: Harvard's CS50 course is offered for free on edX, covering programming fundamentals, algorithms, and computer architecture; a verified certificate can be earned for a fee.

Why you should care: The course provides a solid foundation for diploma-level IT studies and is recognized internationally, enhancing both resume and LinkedIn profile.

Impact: Medium.

Events Near You

No in-person tech events were found for Gandhinagar, Ahmedabad, or GIFT City, Gujarat.

Tools Worth Trying

Amazon Q Developer - Free Tier AI Coding Assistant for AWS-Centric Development

What happened: Amazon launched a free tier of Q Developer, an AI-powered coding assistant integrated with popular IDEs and CLI tools, offering contextual help for AWS services, Lambda functions, CloudWatch debugging, and infrastructure-as-code.

Why you should care: A Diploma IT student in India often works on cloud-based projects or campus labs that use AWS; the assistant's built-in AWS knowledge can accelerate learning, reduce time spent on cloud configuration, and produce correct code snippets without a paid subscription.

Impact: Medium

AskCodi - Free AI Assistant Tailored for Students and Beginners

What happened: AskCodi released a free tier focused on code explanations, documentation generation, and step-by-step guidance, positioning itself as a learning-oriented AI coding helper.

Why you should care: Ideal for students new to programming concepts, AskCodi can clarify syntax, generate example code, and produce documentation, helping you grasp fundamentals and complete assignments faster.

Impact: Medium

My Action for Tomorrow

Download and set up the Hy4 open-source model on a local development environment to experiment with its multimodal capabilities.

If You Only Remember 3 Things

- Patch all PHP installations immediately to mitigate critical remote-code-execution bugs.
- Leverage Tencent's Hy4 LLM for free, hands-on AI project development.
- Explore IndiaAI Mission's offline models for secure, locally compliant AI solutions.
