3 Things I Absolutely Should Know Today

China's DeepSeek unveils new AI training method for scaling large models

What happened: DeepSeek published a research paper describing a novel method to train large language models more efficiently, which analysts label a breakthrough for scaling foundational AI models.

Why you should care: Understanding emerging training techniques can inform coursework and projects on AI model development, giving you a competitive edge in assignments and internships that involve deep learning.

Impact: Medium

Oracle Database 23c Free - Developer Release

What happened: Oracle launched a free-to-download "Developer Release" of Oracle Database 23c, removing account and license click-through steps and allowing unrestricted use of the converged database for all data models and workloads.

Why you should care: As a Diploma IT student, you can now experiment with a leading enterprise-grade RDBMS on your laptop or lab machines without licensing costs, gaining hands-on experience in SQL, PL/SQL, and multi-model data handling that is valued by Indian IT recruiters.

Impact: Medium

Intel D-Series GPU Introduces 480 GB Memory for AI Inference

What happened: Intel unveiled its D-Series GPU with a record-breaking 480 GB of on-board memory, designed to run large language models (up to 300 billion parameters) and support high-throughput AI inference workloads.

Why you should care: Exposure to cutting-edge AI hardware equips students to experiment with advanced models locally, enriches project portfolios, and aligns with industry demand for AI-ready developers in the Indian tech market.

XPENG and Peking University introduce FastDriveVLA visual token pruning framework for autonomous driving AI

What happened: The collaboration released FastDriveVLA, a visual token pruning system that reduces computational load by focusing AI attention on essential visual information, accepted for presentation at AAAI 2026.

Why you should care: The framework exemplifies practical AI optimization for real-time applications, offering a concrete case study for subjects like computer vision and embedded AI, and could inspire capstone projects or internships in the automotive sector.

Impact: Medium

dbForge Studio for PostgreSQL 2026.2 Update

What happened: Devart released dbForge Studio 2026.2, adding an embedded PostgreSQL debugger and enhanced visual object editors to its unified database-tool suite.

Why you should care: The new debugger lets you step through PL/pgSQL code, a skill increasingly required for backend development and data-engineering roles; the visual editors simplify schema design and query building, useful for coursework and project work.

Cybersecurity

7 Cybersecurity Trends to Know in 2026

What happened: Coursera published a summary of the 2026 cybersecurity landscape, highlighting remote-work data protection, machine-learning attacks, and upgraded multi-factor authentication among the top trends.

Why you should care: Understanding these trends helps a Diploma IT student focus on skills that employers will demand-cloud security, AI-aware defenses, and strong identity management.

Impact: Medium

What Is an Attack Simulation And How Does It Work?

What happened: Picus Security detailed how attack simulations (email, network, web-application) are used to test detection and prevention capabilities, noting recent efficacy percentages for each vector.

Why you should care: Learning to configure and interpret attack simulations equips a student with practical defensive testing skills, valuable for internships or entry-level security roles.

India

US cybersecurity firm N-able opens India GCC, plans 50% local workforce expansion by end-2026

What happened: U.S.-based N-able announced a new Global Capability Centre in India and will increase its Indian staff by at least half by the end of 2026, targeting AI and cybersecurity talent.

Why you should care: The expansion creates entry-level and internship opportunities for IT diploma students in Gujarat, offering hands-on experience with enterprise-grade security tools and exposure to global tech practices.

Cybersecurity and Data Protection: Understanding the Legal Connection in India

What happened: A legal analysis outlines how the Information Technology Act, 2000, CERT-In directives, and the Digital Personal Data Protection Act, 2023 (with its phased rules) together define compliance requirements for Indian businesses.

Why you should care: Knowing these obligations helps IT diploma students prepare for roles that involve data-privacy compliance, security audits, and implementation of lawful safeguards-skills increasingly demanded by employers.

Learn

Learn Cybersecurity FREE - CompTIA Security+ SY0-701 Full Course (YouTube - TAClouds) - Worth doing

What happened: TAClouds uploaded a full-length, free video course covering the CompTIA Security+ SY0-701 exam syllabus, including network security, threats, and risk management.

Why you should care: The Security+ certification is recognized internationally and can boost a Diploma IT graduate's employability in cybersecurity roles across India's growing IT services sector.

Impact: Medium

AWS Skill Builder Certifications 2026 - Free Cloud, AI & Data Courses (YouTube - C Job Hub) - Maybe

What happened: C Job Hub posted a series of free video tutorials and certification pathways on AWS Skill Builder, covering cloud fundamentals, AI services, data engineering, and machine learning.

Why you should care: Mastering AWS fundamentals and related AI tools aligns with industry demand for cloud-savvy developers; completing these free modules can strengthen your resume for internships and entry-level positions in Indian tech firms.

Impact: Medium

Events Near You

Ahmedabad Startup Meetup - eChai Ventures

When: 11 October 2025, 6 pm-8 pm

Where: iHub Gujarat, Prajna Puram, KCG Campus, Ahmedabad, Gujarat

How to attend/register: Registration details provided by eChai Ventures (check their website or event page for RSVP).

Tools Worth Trying

10 Developer Productivity Tools for Enterprises 2026

What happened: A recent article lists over 50 vendors offering tools that go beyond traditional IDEs, covering infrastructure, execution, delivery, and analytics to boost developer productivity.

Why you should care: Understanding these tools can help a Diploma IT student select appropriate software for project work, internships, or future employment in Indian enterprises that prioritize modern development pipelines.

Impact: Medium

Tech Outside AI

Linux 7.0 Kernel Released with Expanded Hardware Support and XFS Self-Healing

What happened: The stable Linux 7.0 kernel launched, adding support for new Intel Nova Lake and Crescent Island accelerators, AMD graphics IP blocks, and a self-healing feature for the XFS file system.

Why you should care: Understanding the latest kernel updates helps Diploma IT students master operating system concepts, driver integration, and storage reliability-key skills for internships and entry-level developer roles in India.

Impact: Medium

Intel D-Series GPU Introduces 480 GB Memory for AI Inference

What happened: Intel unveiled its D-Series GPU with a record-breaking 480 GB of on-board memory, designed to run large language models (up to 300 billion parameters) and support high-throughput AI inference workloads.

Why you should care: Exposure to cutting-edge AI hardware equips students to experiment with advanced models locally, enriches project portfolios, and aligns with industry demand for AI-ready developers in the Indian tech market.

Impact: Medium

My Action for Tomorrow

Download and install the Oracle Database 23c Developer Release on your personal workstation to begin hands-on experimentation with enterprise-grade SQL features.

If You Only Remember 3 Things

- DeepSeek's new training method signals faster, more scalable AI model development.
- Oracle Database 23c is now freely available for student use, removing cost barriers.
- Intel's D-Series GPU with 480 GB memory enables local experimentation with extremely large AI models.
