3 Things I Absolutely Should Know Today

DeepMind's WeatherNext AI model achieves breakthrough in cyclone forecasting

What happened: DeepMind announced that its WeatherNext model now predicts cyclone tracks, intensity, and wind structure with state-of-the-art accuracy, giving forecasters an extra day of reliable lead time.

Why you should care: The model showcases advanced deep-learning techniques for time-series and spatio-temporal data, topics covered in many IT curricula and useful for projects or internships involving AI-driven analytics. Understanding its architecture can help you build similar predictive models for other domains.

Impact: Medium

India's Digital Personal Data Protection Act 2023 operationalised - Rules notified Nov 13 2025

What happened: The Ministry of Electronics and Information Technology released the Digital Personal Data Protection Rules 2025, which put the DPDP Act 2023 into effect and set a phased compliance timeline through 2027.

Why you should care: Understanding the new data-privacy framework is essential for any IT diploma graduate who will handle user data, develop applications, or work with cloud services in India, as non-compliance can lead to fines and project delays.

Impact: Medium

CM IT Fellowship Program - 2-Year M.Tech in Data Science & AI with Rs. 50,000 monthly stipend

What happened: The Government of Chhattisgarh announced a fellowship that funds a two-year M.Tech program in Data Science and Artificial Intelligence, combined with hands-on projects for state-level governance, and provides a monthly stipend of Rs. 50,000.

Why you should care: As a Diploma IT student, this program offers a clear pathway to upgrade to a master's degree, gain practical experience on government tech projects, and receive a substantial stipend that can support living expenses while you study.

Impact: Medium

Google AI "AI in Science" report highlights 15 million Gemini interactions and 2,600 specialized AI models

What happened: Google released a comprehensive report detailing how its Gemini AI system is used across scientific disciplines, analyzing billions of queries and a catalog of thousands of domain-specific models.

Why you should care: The report provides concrete case studies on deploying large language models for research tasks, data extraction, and automation-skills directly applicable to coursework, capstone projects, and entry-level AI roles.

Developer World

Devart dbForge 2026.2 Release Enhances Database Development

What happened: Devart announced dbForge 2026.2, adding visual editors for PostgreSQL event triggers, functions and procedures, allowing developers to create and modify these objects without writing SQL manually.

Why you should care: Diploma-level IT students working on backend or data-centric projects can speed up learning and prototyping of PostgreSQL databases, reducing syntax errors and gaining hands-on experience with industry-grade tooling.

Impact: Medium

Google Cloud Announces Open-Source MCP Toolbox 1.0 for 40+ Databases

What happened: Google Cloud released version 1.0 of the open-source MCP Toolbox for Databases, supporting more than 40 database engines and guaranteeing API stability across minor releases.

Why you should care: The toolbox provides a unified API for connecting to diverse databases, useful for student projects that require multi-DB integration or cloud-based deployments, and it's free to use on Google Cloud's free tier.

Cybersecurity

SANS Institute - "Top 5 Most Dangerous New Attack Techniques to Watch (AI-focused)"

What happened: In March 2026 SANS published a report identifying five emerging attack techniques, all leveraging artificial intelligence, such as AI-generated phishing content and automated vulnerability exploitation.

Why you should care: Understanding these AI-driven methods helps Diploma-level IT students prepare for modern security roles, especially for entry-level positions like security analyst or junior pentester where awareness of current attack vectors is essential.

Impact: Medium

CloudSEK - "15 Latest Cyber Threat Trends Shaping Cybersecurity in 2026"

What happened: CloudSEK's September 2026 article lists current high-impact threats including ransomware, AI-assisted attacks, deep-fake phishing, and zero-day exploits, summarizing how each is evolving.

Why you should care: The concise trend overview gives students a quick reference for exam preparation, project topics, and interview discussions, aligning coursework with industry-relevant security challenges.

Learn

Free AI Courses on Coursera

What happened: Coursera lists a collection of free artificial intelligence courses that award certificates upon completion, covering fundamentals to advanced topics in AI and machine learning.

Why you should care: These courses are accessible online, cost-free, and provide recognized certificates that can strengthen a Diploma IT student's résumé and LinkedIn profile when applying for internships or entry-level jobs in India's growing AI sector.

Impact: Medium

Google Cloud Machine Learning & AI Training

What happened: Google Cloud offers free machine-learning and AI courses that prepare learners for industry-recognized Google Cloud certification, teaching low-code solution design, model deployment, and scaling.

Why you should care: The certification validates practical cloud-AI skills highly sought by Indian IT firms and startups, giving Diploma IT students a competitive edge for cloud-focused roles.

India Science, Technology & Innovation (ISTI) - Centralised Portal for Fellowships & Scholarships

What happened: The ISTI portal aggregates a wide range of merit-based fellowships and scholarships for school, college, and research students across India, covering technical education and research support.

Why you should care: The portal provides a single point of access to discover government-funded financial aid options relevant to IT and engineering studies, helping you identify and apply for scholarships that can reduce tuition costs and support further education.

Events Near You

Ahmedabad Innovation Summit 2026

When: 16 January 2026, 9:00 AM - 5:00 PM

Where: Ahmedabad (venue details not specified)

How to attend: Register via startup.gujarat.gov.in

Global Startup Summit 2026 - Gandhinagar & Ahmedabad

When: Saturday, 12 December 2026

Where: Infocity Club and Resort, Gandhinagar & Ahmedabad

How to attend: Register via globalstartups.club

Tools Worth Trying

Metabob AI-Powered VSCode Extension Launches

What happened: Metabob released a new VSCode extension that uses generative AI to automatically detect, explain, and suggest fixes for code bugs directly within the editor.

Why you should care: The tool can reduce the time spent on debugging, a common bottleneck for Diploma IT students building projects or completing lab assignments, thereby improving coding efficiency and learning speed.

Impact: Medium

Source: Yahoo Finance

Raycast Launches AI-Enhanced Developer Command Center

What happened: Raycast introduced AI-driven extensions that integrate GitHub PR reviews, Jira issue lookup, AWS shortcuts, Docker management, and on-demand Claude/GPT code assistance into a single keyboard-driven interface.

Why you should care: Raycast consolidates frequent development tasks into fast keystrokes, helping students streamline workflow, minimize context switching, and accelerate project development on limited hardware.

Tech Outside AI

Meta Outlines New MTIA Accelerator Roadmap for Next-Gen AI Compute

What happened: Meta announced its upcoming MTIA 500 AI accelerator, promising a 50 % boost in HBM bandwidth (up to 27.6 TB/s) and up to 512 GB HBM capacity per chip.

Why you should care: Understanding the specs of emerging AI accelerators helps you anticipate hardware requirements for future projects and align your learning (e.g., CUDA, low-level optimization)

with industry directions.

Impact: Low

AMD Launches Helios AI Rack-Scale System to Challenge Nvidia

What happened: AMD released the Helios AI system, a rack-scale solution designed for large-scale AI workloads, positioning it as a competitor to Nvidia's AI infrastructure offerings.

Why you should care: Exposure to alternative AI hardware platforms broadens your skill set, especially if you plan to work on AI model deployment or data-center engineering in India's growing tech sector.

Impact: Low

My Action for Tomorrow

Enroll in the free Coursera AI course collection to acquire a recognized certificate before the end of the month.

If You Only Remember 3 Things

- DeepMind's WeatherNext model shows how advanced AI can improve real-world forecasting.
- India's DPDP Rules 2025 are now active; compliance is mandatory for all IT projects handling personal data.
- The CM IT Fellowship provides a funded route to an M.Tech in Data Science & AI with a Rs. 50,000 monthly stipend.
