3 Things I Absolutely Should Know Today

Indian CERT urges firms to contain exploited internet-facing flaws within 12 hours

What happened: CERT-In issued an advisory requiring organisations to patch, mitigate, or isolate known exploited vulnerabilities in internet-facing "crown-jewel" systems within a 12-hour window where feasible, and called for continuous exposure management and AI-governance controls.

Why you should care: As a Diploma IT student in India, you are likely to work with or support domestic enterprises that must meet these strict timelines, making rapid vulnerability assessment and remediation a priority skill.

Impact: High

India approves \$13.3 billion for fresh semiconductor push

What happened: The Indian government announced a \$13.3 billion investment to develop semiconductor intellectual property, chip design capabilities, new fabrication facilities and research and development initiatives.

Why you should care: A stronger domestic semiconductor ecosystem will create more internship, project and job opportunities for Diploma IT students and provide locally-developed hardware platforms for coursework and startups.

Impact: High

Arm unveils production-ready AGI CPU with 136 cores, targeting AI workloads

What happened: Arm announced its first production-ready AGI CPU, a 136-core processor designed for high-performance AI and agentic computing, alongside the new Neoverse CSS N4 platform.

Why you should care: The chip signals a shift toward ARM-based data-center CPUs, opening opportunities to learn and develop AI-optimized software on architectures that may become dominant in cloud and edge services used by Indian tech firms.

Impact: High

AI

Microchip launches MPLAB AI Coding Assistant for embedded development

What happened: Microchip introduced an AI-powered chatbot integrated into its MPLAB IDE that offers real-time code suggestions, autocomplete and product-specific guidance directly from the sidebar. The tool is continuously updated with Microchip's embedded product data.

Why you should care: Diploma IT students focusing on embedded systems can accelerate learning and prototyping by receiving instant, context-aware assistance while writing firmware for Microchip microcontrollers, reducing reliance on external forums.

Impact: Medium

Shield AI completes acquisition of Aechelon Technology

What happened: Shield AI, a defense technology firm developing autonomous AI pilots, finalized the purchase of Aechelon Technology, a specialist in high-fidelity simulation and synthetic-reality tools, after closing a \$2 billion financing round.

Why you should care: The deal strengthens AI-driven simulation platforms that are increasingly used for training autonomous systems, offering potential internship, project, and research opportunities for IT students interested in AI, robotics, and simulation technologies.

Impact: Medium

Developer World

C2Call to Launch Free SDK for Mobile App Developers

What happened: C2Call announced the private-beta launch of its mobile-app SDK in April 2013, offering it free of charge along with complimentary cloud hosting and monetisation features.

Why you should care: Access to a free, ready-to-use SDK and cloud services can accelerate your mobile-app projects and help build a portfolio without upfront cost-valuable for a Diploma IT student seeking practical experience and internship material.

Impact: Medium

Semiconductor market hits \$795.6 billion in 2025, forecast to double to \$1.5 trillion in 2026

What happened: The Semiconductor Industry Association reports global semiconductor sales reached a record \$795.6 billion in 2025 and projects worldwide sales will reach \$1.5 trillion in 2026.

Why you should care: The rapid expansion signals strong demand for hardware design, chip-level programming, and related IT services, creating abundant internship and job opportunities for Diploma IT students in India and increasing the relevance of semiconductor-focused coursework.

Impact: High

My Action for Tomorrow

Set up a test environment on a virtual machine to practice rapid patching and isolation of a known vulnerable service, replicating the 12-hour remediation workflow recommended by CERT-In.

If You Only Remember 3 Things

- Indian CERT mandates 12-hour remediation for critical internet-facing flaws.
- The government is committing \$13.3 billion to build a domestic semiconductor ecosystem.
- Arm's 136-core AGI CPU introduces a new platform for AI-focused development.
